

Math Computing

NCERT 9.7.1.6

This question is from class 9 NCERT chapter 7.triangles

1. $AC = AE$, $AB = AD$ and $\angle BAD = \angle EAC$. Show that $BC = DE$

Figure 1: $\triangle ABC$ and $\triangle ADE$

Construction steps:

(i) Let assume, the input parameters are,

Parameter	Value	Description
θ	60°	$\angle \mathbf{BAD} = \angle \mathbf{CAE}$
B	$\begin{pmatrix} 0 \\ 0 \end{pmatrix}$	Reference point at origin
D	$\begin{pmatrix} 6 \\ 0 \end{pmatrix}$	point D on the same axis of B
C	$\begin{pmatrix} 8 \\ 0 \end{pmatrix}$	point C on the same axis of B

Table 1: Input Parameters

\therefore the output can be calculated as,

Parameter	Value	Description
BD	$\ B - D\ $	Length of BD
CD	$\ C - D\ $	Length of CD
α	$\frac{180-\theta}{2}$	Angle ABD
AB	$\mathbf{BD} \frac{\sin \alpha}{\sin \theta}$	Length of AB
A	$\mathbf{B} + \begin{pmatrix} \mathbf{AB} \cos \alpha \\ \mathbf{AB} \sin \alpha \end{pmatrix}$	point B makes an angle α with line (AB , BD)
AD	$\ A - D\ $	Length of AD
AC	$\ A - C\ $	Length of AC
β_1	$\cos^{-1} \frac{\mathbf{AC}^2 + \mathbf{CD}^2 - \mathbf{AD}^2}{2\mathbf{ACAD}}$	Angle ACD
CE	$\mathbf{AC} \frac{\sin \theta}{\sin \alpha}$	Length of CE
β	$\alpha + \beta_1$	Angle ECB
E	$\mathbf{C} + \begin{pmatrix} -\mathbf{CE} \cos \beta \\ \mathbf{CE} \sin \beta \end{pmatrix}$	point C makes an angle β with line (BC , CE)

Table 2: Output Parameters

\therefore By, joining these points forms the required figure
